

“RezEngine - Integrated Travel Solutions”

‘RezEngine offers comprehensive travel solutions to tour operators, agents, hotels and service providers’

RezEngine has combined all the necessary tools to create a complete online reservation system that serves the needs of the leisure travel industry. We have developed this software in collaboration with industry leaders to provide solutions that caters from a small inn to a large corporate hotel and from a single destination tour operator to a large corporate operator managing multiple destinations. By precisely addressing the e-business solutions for the travel industry needs, our goal is to make RezEngine the preferred booking engine for the travel industry.

Built using the latest Internet Technologies, RezEngine is configurable, economical and is the only Online Reservation System customizable to individual needs.

Salient Features

- Package configuration and Contract Management.
- Proprietary process that simplifies loading contracts and creating packages.
- Integration of GDS like Sabre, Amadeus & Galileo.
- Facility to view/manage reservations and to update booking / payment status.
- Web interface to service providers to update inventory.
- Online back office management system.
- Single point software for configuration of tour operator's site, tour packages, accounting and reporting system.
- Option for Hotel management to edit content like rates on packages, package availability etc.
- Data Synchronization between intranet and extranet modules.
- Automation of room management to minimize unsold room nights.
- Traffic Reports show availability and reservation status.
- Email and Fax integration to automate communication with customers and vendors.
- Report Writer to create and customize reports on the fly.
- Ability to create reports in various formats including HTML, TEXT, EXCEL and PDF.

“RezEngine - Integrated Travel Solutions”

One can license our product in either ASP Model or as a wholly owned version.

■ ASP Model Solution - Advantages:

Being able to buy just-in-time, pay-as-you-go infrastructure plus implemented applications is the way to go as it lets you focus on your core business rather than internal IT operations.

The application and data is stored on our servers, and our clients can access it anytime using a web browser. Providing predictable, simplified pricing, the RezEngine ASP Model delivery method equips users with an economical way to access the comprehensive portfolio of IT solutions.

By using the Internet or a dedicated network for application access, users can realize significant cost savings in the areas of hardware and software, system implementation, support personnel, data storage and ongoing maintenance.

■ Time

The timing and duration of an on-site implementation can be quite lengthy, from several weeks to several months.

You may not have the luxury of waiting months before you begin to use the system and capitalize on the resulting benefits. Plus, for each day without the solution, the existing problem generates increased costs, lost

It takes a relatively short amount of time to make a RezEngine ASP solution “customer ready.”

In offering application access 24/7, our ASP solution gives you the flexibility to utilize your IT resources more effectively while improving employee productivity.

During the workweek, users readily access information via the desktop. But, when away from the office at a conference, the airport, home or from a hotel they can also review and respond to vital business issues by logging on to your application.

■ Investment

The economic model of our ASP Model solution dramatically reduces your upfront exposure and lets you pay a predictable, simplified monthly fee.

■ Data Storage

Management of your data center including personnel, environmental, technical and financial issues takes time and money that might otherwise be applied to other strategic initiatives.

Fully staffed by experts in data center management, our facilities offer a secure and environmentally regulated area, and provide you with easy access to your confidential information.

■ Resources

By accessing applications running in the ASP environment, you are no longer responsible for ensuring that the appropriate staff is available and possesses the required skill set to support the solution.

Because the applications are hosted by us in a secure data center, you do not hire and train the engineers who install the necessary hardware, connectivity and software for each solution, the application experts who operate the systems, or the engineers who maintain them.

■ Security and availability :

Password-protected access to the RezEngine portal requires customer and individual user Identification.

User access to your specific applications available 24 hours a day, seven days a week.

Accessing applications remotely via the our environment lowers your total cost of ownership by eliminating upfront and ongoing capital investments.

Predictable, simplified pricing streamlines your forecast, planning and budget processes.

With an ASP solution, you can avoid investments in hiring IT resources.

■ Investment

Running a Web-enabled RezEngine solution on the desktop requires an Internet connection through the ISP of your choice, a Web browser (either Netscape or Internet Explorer) and a Pentium-class desktop computer.

Fastest performance is obtained with newer desktop equipment and a high-speed modem, T1 line or DSL connection.
